

HOLIDAY & HOME PARKS

- Luxury lodges
- Caravan parks
- Campsites
- Residential parks

Talk to us about wastewater treatment so they don't have to

With increasing environmental demand on holiday and home parks, we work in collaboration with you to identify and solve onsite specific wastewater treatment challenges.

- **Meeting Environment Agency standards even at sensitive sites**
- **Resilient process managing seasonal variations in occupancy levels**
- **Delivering cost-efficient treatment for the whole life of the plant**

Our UK custom designed and manufactured wastewater treatment systems are adapted to meet your specific needs, backed by continued dedicated technical support throughout the whole project.

Meeting the precise needs of clients

We build adaptable systems with a minimum of 25 years design life that are simple to install, operate and maintain.

- **Low operator maintenance systems can include real-time monitoring**
- **Energy saving timer – pulse air from the blower(s) into the process**
- **Site refurbishment can further reduce cost and site waste**
- **Modular design overcomes sites with tight footprint and difficult access**
- **Above and below ground options for landscaped sites and poor site conditions**
- **Off-site build of the plant keeps onsite installation works to a minimum**
- **Hire solutions to keep sites operational and within consent**

Collaborating with clients, identifying ways to improve efficiency and profitability.

- **Upfront consultation to understand the specific needs of the project**
- **Dedicated technical support throughout the whole life of the project**
- **Partnering park owners, park designers, surveyors and engineering consultants to deliver best possible solution**

Satisfied customers

Home Farm Holiday Centre

Owner, Dibby Nethercott said:

"Replacing our treatment plant, which was installed in the 1950s, was a major operation which was expertly managed from start to finish."

Sustainable initiative at Toby Carvery

Repurposing of an existing onsite system, increasing the on-site capacity. Mitchells & Butlers's area building manager, Martin Lyons said:

"As a business, we manage our water, our energy and our waste in a way which is cost effective to the business and reduces our impact on the environment. The idea of repurposing a wastewater treatment plant was inspired and is exactly the kind of sustainability initiative we expect from our supply chain partners which was expertly managed from start to finish."

Government's new garden city

Metropolitan Director, John Marsh said:

"Finding a cost effective solution for the treatment of wastewater has led Metropolitan to install the onsite Hybrid-SAF plant – which meets the entire needs of the Castle Hill development and will be delivered on time and to budget."
